Registration: Visit www.enerquality.ca/training

The highly-recommended pre-requisite for those new to ENERGY STAR for New Homes – an introduction to the principles behind energy efficient construction.

This is a must-attend for those who:

- Are new to the ENERGY STAR® for New Homes program
- Have new staff who need to better understand your business
- Have suppliers who need to understand high-performance home building
- Could use a building science refresher

Past participants say training

- "helped me feel more confident in my knowledge"
- "taught me what mistakes not to make"
- "provided good advice about the market and what's coming"

Discover why thousands use the ENERGY STAR training series to build better homes, gain a reputation as exceptional builders, increase customer satisfaction, and prevent post-construction call-backs and other deficiencies. Key topics in the construction of high performance homes include:

- Strategies for more effective building envelope construction, moisture control, and air movement through the built structure
- An examination of current building issues and solutions to reduce material, labour, call-back and warranty costs while improving cycle and process times
- New products, foundation options, new ventilation and heating systems

Who should attend: New ENERGY STAR participants • Builders • Contractors • Architects • Project Managers • Developers • Manufacturers and distributors of high performance building products • Realtors • Consultants • Technologists • All those responsible for marketing high performance homes

This workshop satisfies OAA and OBOA and other Continuing Education Credits
